More than a racing team

Texas A&M University-San Antonio

A student-led community connecting motorsports, hands-on learning, and opportunities beyond the classroom.

Our purpose

Jaguar Motorsports brings together students interested in racing, engineering, business, marketing, and media. The program connects simulation, driver development, and on-track competition with the teamwork required to operate a motorsports organization.

Our mission

Develop real-world racing skills, leadership experience, and career-building opportunities while fostering a community grounded in innovation, competition, and teamwork.

A role for every interest

Racing and technical: simulation practice, driver development, technical workshops, and team projects.
Business and operations: budgeting, sponsorship outreach, event planning, and team coordination.
Media and community: photography, storytelling, marketing, and community engagement.

Learning through participation

Motorsports gives students a shared project with real responsibilities. Preparing a team requires planning, communication, technical learning, and the ability to solve problems together.

Put classroom knowledge to work

Students can practice budgeting, organizing resources, documenting decisions, and meeting deadlines. Media work provides opportunities to build a portfolio, while technical projects encourage students to ask questions, test ideas, and learn from experience.

Build leadership and belonging

The program creates a place for students with different interests to contribute. Coordinating activities, helping teammates, and working with community organizations give members opportunities to take responsibility and build relationships across campus.

Connect preparation with real racing

Simulation and driver development support our pathway toward on-track competition through the Collegiate Racing Series. Participation depends on funding, driver readiness, required licensing, and university approvals. Racing gives the team a practical goal for its work throughout the year.

How support helps students

Support helps cover vehicle preparation, driver development, licensing, entries, and travel. Equipment, instruction, and relevant in-kind contributions can also help students participate and build a sustainable program.
